

The Client

Esteve Teijin Healthcare specialise in home-based health therapies. It is a joint venture between Esteve Pharmaceuticals, a pharmaceutical sector leader in Spain, and Teijin, a Japanese corporation focussed on health and technology.

Established in 2009, today Esteve Teijin Healthcare has around 60 patient care points and 4 logistics centres, serving more than 58,000 patients with high ethical and quality standards. Esteve Teijin evolved into a leading organisation establishing itself as a strong competitor to the big brands within the European Health sector. Esteve Teijin is focussed on providing access to innovation to customers, public administration, health professionals and above all, to patients.

The Problem

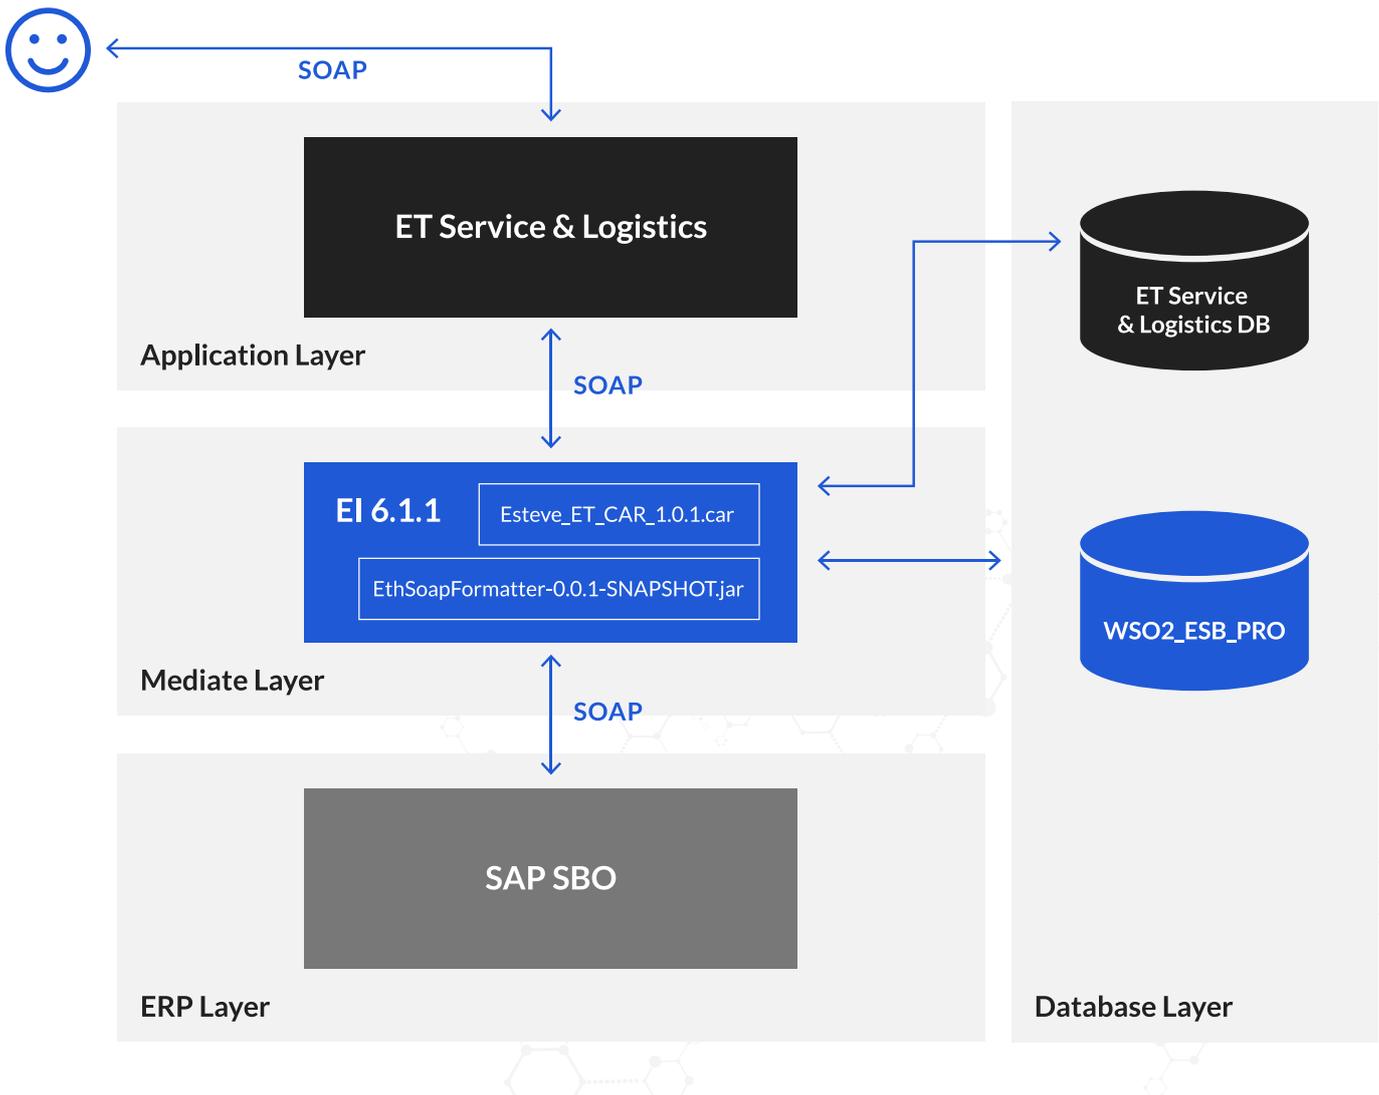

Esteve Teijin needed to successfully integrate their internal IT systems in order to reduce the overhead of administration, infrastructure and management operations. There was also a need to improve the quality and timeliness of data to enhance decision making whilst also keeping costs to a minimum. The main applications and sources of truth were the SAP ERP system, the line of business application called ET Service & Logistics, and a variety of backend databases.

The Solution

Chakray used WSO2 Enterprise Integrator to create a common mediator layer, performing data transformation/normalisation, messaging, validation, notification and monitoring across systems with real-time processing.

The solution deployed ensured privacy and security, accurate and up-to-date information sharing, as well as high level performance, thanks to features delivered with customisation and Web-services development.

Why WSO2?

The WSO2 platform enabled Esteve Teijin to achieve seamless integration across their systems, maintaining high performance and configurability.

WSO2 allows us to modify the code to create solutions for very specific requirements, besides out-of-the-box functionality and systems connectors.

In addition, as a complete Integration Platform, WSO2 offers unlimited possibilities for future capability expansion, from API Management, IAM and CIAM, to IoT and Big Data.

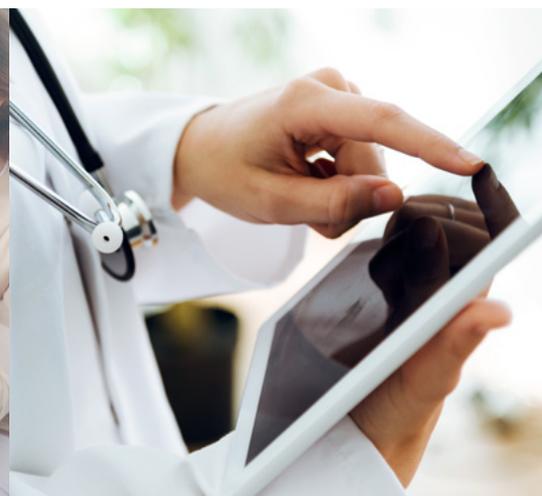

WHY CHAKRAY

Chakray has been deeply involved with Esteve Teijin from the beginning of the relationship in 2017 and remains so today. The project lifecycle has covered many areas of service delivery including Architecture and Design, Deployment and Upgrading, Development Support, QA Consulting, Training and Knowledge-Transfer, both teams working closely to achieve the desired business and technology outcomes.

The Client's Feedback

“Our relationship with Chakray and our adoption of WSO2 technology has helped drive key technical improvements to our organisation which enables us to continue to improve the value and benefits we bring to our customers”

Santi Porté, IT Manager for Esteve Teijin
